Gary:

I talked with the field crew and they have not noticed any odors nor are they getting any appreciable PID readings. All we are doing today is drilling. The location is between the south tanks and the fenceline behind the houses on Grace Lane but it is closer to the tanks than the fence.

However, I will go to the Site and see if I notice any odors. Maybe there is another problem that is not connected to the field work.

Brenda

Brenda:

I just talked with (b) (6) and she indicated that whatever you guys are doing today the odor being generated is bad. Can you check this out?

Thanks

Gary:

Happy New Year to you.

We are doing the second phase of sampling. The pumping was to remove water from the asphalt area on the school side so we could get a drill rig in. We haven't removed water from the tank containments since before the holidays. We removed about 12 inches then so we didn't have to deal with any weather and emergency removals during the last two weeks of the year.

Thanks
Brenda

Brenda

Happy New Year. I received a call from (b) (6) interested in what activities are currently ongoing as she hears pounding and pumping.

Can you tell me exactly what is happening? I assume you are doing more sampling and removing water to Lonestar Ecology.

Gary Moore
